

Statement of Considerations

REQUEST BY DEERE & COMPANY FOR AN ADVANCE WAIVER OF DOMESTIC AND FOREIGN RIGHTS IN SUBJECT INVENTIONS MADE IN THE COURSE OF OR UNDER DEPARTMENT OF ENERGY GRANT NO. DE-FG05-99OR22666; DOE WAIVER DOCKET W(A)-01-013 [ORO-765]

Petitioner, Deere & Company, has made a timely request for an advance waiver to worldwide rights in Subject Inventions made in the course of or under Department of Energy (DOE) Grant No DE-FG05-99OR22666 made to the Gas Research Institute (GRI). Petitioner is a subcontractor to GRI under the grant (Subcontract No. 8336). This waiver is specifically for the work to be performed under tasks 5 and 6 of the follow-on program of the Natural Gas Engine Enhanced Efficiency Program. The work under this grant calls for the development of technologies to improve natural gas engine efficiencies for automotive markets.

Petitioner requested and was granted an earlier advance waiver of rights to subject inventions under a related subcontract under the same program (W(A)-97-031 [ORO-670]). However, since the follow-on task work required a substantial modification of scope and funding from the original plan due to the unavailability of funding from another participant, it was determined that a new waiver was required. This work is sponsored by the Office of Transportation Technologies.

The projected total dollar amount of the Petitioner's subcontracted effort is \$950,874 with Petitioner cost sharing 50% of this research effort. The period of performance is 18 months.

Petitioner is a recognized leader in the development of medium and heavy duty diesel and natural gas engines for off-highway applications. Since 1995, Petitioner has been producing a 8.1 liter model of a lean burn compressed natural gas engine for on-highway commercial bus and standard school bus applications and has also developed a 6.8 liter version. Furthermore, Petitioner holds several patents related to natural gas engines. Therefore, Petitioner's experience and expertise will contribute substantially to commercialization of the inventions made under the subcontract.

Petitioner manufactures approximately 130,000 medium and heavy duty engines each year. About 2/3 of these are used in John Deere farm and industrial equipment and 1/3 are sold to original equipment manufacturers. Considering its market position, it has the capability to commercialize the inventions developed under the subcontract.

Petitioner has invested in excess of \$14 million developing, testing, and bringing new low emission electronically controlled compressed natural gas engines into the market for heavy duty on-highway applications. This investment by Petitioner continues in both lab and field testing. Furthermore, assuming successful outcome of the proposed effort and if this waiver is granted, Petitioner will invest significant resources to

implement these technologies in current and future products.

Petitioner has agreed to the standard DOE waiver terms and conditions, which will be incorporated into its subcontract, including march-in rights, retention of by the government of a license, preference for U.S. industry and U.S. Competitiveness clauses.

Petitioner has agreed that any products embodying any waived invention or produced through the use of any waived invention will be manufactured substantially in the United States, unless the Petitioner can show to the satisfaction of DOE that it is not commercially feasible to do so. In the event DOE agrees to foreign manufacture, there will be a requirement that the Government's support of the technology be recognized in some appropriate manner, e.g., recoupment of the Government's investment, etc. The Petitioner has further agreed to make the above condition binding on any assignee or licensee or any entity otherwise acquiring rights to any waived invention, including subsequent assignees or licensees. Should the Petitioner or other such entity receiving rights in any waived invention undergo a change in ownership amounting to a controlling interest, then the waiver, assignment, license, or other transfer of rights in the waived invention is suspended until approved in writing by DOE.

Granting of the waiver should have little effect on competition since there are several competing technology options to improve the natural gas engine efficiencies, this being one of many previously or yet-to-be developed in the marketplace. Thus, there should not be undue market concentration of Petitioner's products.

Grant of the requested waiver should serve as encouragement to other DOE contractors and subcontractors that significant cost sharing will be recognized as an acceptable consideration for granting greater rights in Subject Inventions.

In view of the substantial level of cost sharing by Petitioner and the objectives and considerations set forth in 10 CFR 784.4, all of which have been considered, it is recommended that the requested waiver for worldwide rights be granted.

Emily G. Schneider
Assistant Chief Counsel for
Intellectual Property

Date: 7/10/01

Based on the foregoing Statement of Considerations and the representations in the attached Waiver Petition, it is determined that the interests of the United States and the general public will best be served by a waiver of U.S. and foreign patent rights, and therefore, the waiver is granted. This waiver shall not apply to a modification or extension of the cost-shared subcontract where, through such a modification or extension, the purpose, scope or cost of the subcontract has been substantially altered.
